Information Classification: CONTROLLED

Hi

This is a link to a new information tool about towns and communities in Cornwall, developed in collaboration with Cardiff University Understanding Cornish Places. The purpose of the tool is to pull together a range of information so that we can better understand the range of facilities and the extent to which settlements depend on other places for some facilities or services. We have included all settlements with populations of more than 500 residents – that's over 170 places in Cornwall.

We will continue to add more data and information to this tool and we hope to also include information from Neighbourhood Priorities Statements once published and planning information to build this into a really useful source of information to better understand our places.

We are asking you to have a look at the information that we have about your places and to tell us if there are any key omissions or errors. You may also wish to add to or replace place descriptions to better describe your places. (max 500 words). We've attached a simple table which you may want to use to respond.

Please also tell us if there is any key data that you would like to be included in future versions. Any other feedback on how useful the data is or how easy it is to use would also be very welcome.

Similar tools are in use in Wales Understanding Welsh Places and Scotland Understanding Scottish Places – these have been around for several years and may give an idea of how this tool could evolve over time.

Please come back to us by 19 November 2025 with any changes that you would like us to make.

Many thanks.

Feedback on Understanding Cornish Places

Please use this form to tell us about the details for your settlement. If you have no comments, simply leave the section blank.
